

CASE STUDY

Client: **Moffat & Williamson**

Location: **Dundee, Scotland**

Product: **BM 14200 HVG Brake Tester
Installation and BM 53000 Play Detector**

METHODS

V-Tech were delighted to install the BM 14200 Inground Brake Tester for Moffat & Williamson. Moffat and Williamson have substantial experience in the coach and bus industry. The company provides highest possible level of service to all customers whether tour, private hire or school and general bus services, providing affordable travel to all.

V-Tech installed a BM 14200 Inground Commercial Brake Tester. The BM 14200 is a robust, heavy duty roller brake tester featuring double chained gearing systems, 15KW motors, mechanical motor brakes with large hard wearing rollers. This is the preferred brake tester used by the DVSA in their heavy goods vehicle test stations. The rollers are connected to the control unit for power and to relay all the diagnostic information, as well as the brake test information. Each roller conveys automatic Axle weight through separate weighing cells and through the PC unit. It can be programmed to test any vehicle from passenger cars to heavy goods vehicles.
